

CASE STUDY

Speeding up Merck's R&D process from 6 months to 6 hours

Merck is a leading company in the life science industry, operating in 66 countries with 57,000 employees.

They wanted to accelerate the long manual process of identifying key chemical compounds from scientific literature for future sales.

Together, we went for an **AI R&D Assistant** to:

- ✓ Analyze and identify chemicals in articles
- ✓ Assign official names and unique codes
- ✓ Retrieve additional chemical properties
- ✓ Check the company catalog for sold chemicals

CASE STUDY

Was it easy?

CASE STUDY

Not quite...

We faced a few challenges:

- ✔ Massive input data exceeded LLM limitations
- ✔ The internal catalog lacked complete chemical details
- ✔ We had only 5 weeks to deliver a POC

So how did we solve those?

- ✓ We handled LLM limitations by splitting input into chunks
- ✓ We processed and enriched the catalog with compound details
- ✓ With a team of data engineers and engineer leads, we got straight into work

What were the outcomes:

- ✓ AI-powered interface for chemical identification and analysis
- ✓ Process time reduced from 6 months to 6 hours
- ✓ Proof of concept completed in 5 weeks

"If I had to choose two words to summarize our collaboration with Netguru it would be **speed and efficacy**. They delivered a POC within 5 weeks."
